ABSTRACTION

Based on interview result with biology teacher class VIII-E in a SMPN 01 Purwosari Pasuruan, problem that is faced by student in learning activity a generally is mastering the concept. Learning biology is started by noticing the material that is going to be taught in a board, then teacher explains by using ceramah method. Process of teaching and learning biology in SMPN 01 Purwosari Pasuruan actually is enough good, but in learning in group the are only some students are passive in doing group exercise. So that only some of them who do the exercise, to solve is that problem is heeded teaching and learning method includes all of students in group discussion activity. The learning application in research is cooperative learning method using STAD(Student Teams Achievement Divisions).

This research is purposed to increase the result of study of students class VIII-E SMPN 01 Purwosari Pasuruan. Kind of this research is PTK (classromm action research) that consists of 2 sicluses. This research is done in SMPN 01 Purwosari Pasuruan on 21 of December 2009-20 of January 2010. The sample of this research is students in class VIII-E SMPN 01 Purwosari Pasuruan who consist of 37 students. Method of collecting data uses observation sheet’s cooperative teaching and learning activity and test of study result in the end of every sicluses.

The result of this result show, in the first sicluses students who finish individually are 26 students with classical result 70,72% (in finish yet) with average result 71,05. In the second sicluse who finish individually show increasing 31 students with classical result 83,87% (finish) with average result 77,18. Based on the result of research it can be summarized that the application of cooperative learning using STAD (Student Teams Achievement Divisions) can increase the result of study biology for students class VIII-E SMPN 01 Purwosaro Pasuruan.
