ABSTRACT
Healthy are a situation and quality from body which fuction as natural with all factor descent and area which they have, spirit, and social which enable to every body who productive life in social and economy (undang-undang nomor 23 tahun 1992) according to (Notoatmojoyo 2005; 46) the meaning about healty behaviour is people response foward stimulus or object which interconnected with healt, sick, disease, and factor which gives influence to healty, foods, drinks, and healty service. Another words healty behavior ia all activity or people energy which can be inspected or can not be inspected that have connection with improve of health conditions. From the meaning above we can see how important healt in our life, because individu health in is apart of the important think which can support people succes. People who health itcan be has good activity and can be actualization in optimal without any troubel and feel sick, they can carry out the character and responsible to their selves and another people, besides people who getting sick can not do such as like that.

Well, the purposes of this research is to know tha skill and behavior tesatmen organ reproduction in students surronding, it can be useful in teoritis as conformity for another researcher or another people who need the developing of another tssatment. This research take location in FISIP UMM, with the reason this research can represent a half students from all faculty which exist in UMM.
Kinds of research that was used of this reseach is descriptive with kualitative approach for the researche was used Snowball Aksidental sampling technic. The method for taking the data in this research was used observation, interview and documentation. Data analysis taken from Milles and Hubermen that are, data collection, data reduction, data presentation and take the conclition. The result of this research indicate that the skill of students about healty in organ reproduction is still low it can be show that source only know in nature about healty on organ reproduction in apart pr spread disecise in organ reproduction in general studets healty behavior in keea the healty on organ reproduction had showed in right way, altaogh there are the diffrenees behavior between one informan which anather in keeping healty on organ reproduction. Besides the information which can get from reading newspaper or from friends in activity to keep healty on organ reproduction in between informan mare disposed to use tradisional medicinal therapist with the reason that traalt tioral throatmen is therapy in natural without chemistry besides, there are another informan choosing to use modern therapy with any reason that modern therapy more pactice in how to use and easy toget.
